Portable Appliance Testing by **TOGA HIRE CENTRES**

The Health and Safety Executive states that **25% of all reportable electrical accidents involve portable appliances.** That's why **TOGA HIRE CENTRES** offer a comprehensive Portable Appliance Testing service at competitive rates.

All companies are now liable for prosecution under health and safety legislation where, in the event of an accident, you have failed to make every effort to ensure that all electrical appliances are regularly checked as safe and compliant to current standards. PAT Testing can protect you from fines of up to £20,000.

What is PAT Testing?

A portable electrical appliance is defined as any electrical equipment that is powered between 40 and 240 volts and which is connected to the electrical mains via a flexible cable/plug and socket (usually a 13 amp outlet).

All Toga electrical tools and equipment are rigorously tested prior to each hire.

How can we help?

We can test all the relevant electrical equipment in your property, label each item as safety tested and provide you with an itemized record of the tests for your files.

Please call us for more information.
